## **Numa Debuts NumaRead™ Important Image Workflow Tools at SNM Meeting**

San Diego, June 3, 2006—Numa, Inc (Amherst, NH), the nuclear medicine connectivity company, debuts at the Annual Meeting of the Society of Nuclear Medicine (SNM) NumaRead™, an innovative tool that enables translation of images from non-DICOM to DICOM format, while automating migration of PET, Nuclear Medicine, Nuclear Cardiology and related data stored on older, removable archiving media to modern online storage.

New NumaRead streamlines transfer of archived data maintained on such inefficient, aging media as CD, MOD and DAT tape to more sophisticated storage including NumaStore online RAID, DVD and other long-term archives including PACS. The solution is fully automated for maximum efficiency and offers both an automatic mode for transfer of all stored data as well as a manual mode with query/retrieve for migration of select files.

For sites that wish to maintain their current older archives, the manual mode also may be used to streamline location and access of pre-existing studies on removable media for comparison with new images. Files may be automatically forwarded to another network location for viewing. NumaRead has an easy-to-use Windows interface and logs all operations.

The new device also supports automated translation of entire image libraries from proprietary format to DICOM to enable easy and reliable access, management and communication.

“Today affordable high-capacity archiving media have opened a new world of possibilities in fast and efficient storage, “said Lawrence Smith president of Numa.

“NumaRead is a particularly timely introduction today as many facilities are upgrading storage media and the demand for efficient, accurate data migration is great,” The device will be available for direct sale to end users, leasing for specific data migration projects as well as for sale to OEMs.

### **About Numa**

For over fourteen years, Numa has been the leader in nuclear medicine connectivity and system integration, with solutions that deliver enhanced throughput, efficiency and productive workflow.

Numa meets specific needs in nuclear medicine, nuclear cardiology, PET and PET/CT for image management, archiving, multi-vendor connectivity, DICOM modality worklist management, and secure file transfer throughout the department, enterprise and beyond.

The company plays a vital role in over 1,100 nuclear medicine departments worldwide. Using both DICOM standards and proprietary formats, Numa products offer reliable performance, backed by professional support. The company’s advanced solutions are available directly through Numa and distributors to both end users and OEMs. Visit their website at [www.numa-inc.com](http://www.numa-inc.com).
